

HEMOPHILIA TREATMENT BY INHALATION OF COAGULATION FACTORS

ABSTRACT OF THE DISCLOSURE

[105] Hemophilia treatment by the inhalation of coagulation factors. Dry powder Factor IX is aerosolized to a mass median aerodynamic diameter of 4 μm or less, with at least 90% monomer content, at least 80% activity level, and 10% water or less. The aerosol is slowly, and deeply inhaled into the lung, and followed by a maximal exhale.
